GRACEDAVE J. TORSINO

Caraga, Mindanao, Philippines
gracedave.work@gmail.com
Portfolio

PROFESSIONAL SUMMARY

Computer Science graduate (Cum Laude) with experience in **data collection**, **quantitative evaluation**, experimental research, and software development. Skilled in **organizing datasets**, **analyzing performance metrics**, **creating data visualizations**, and **interpreting results** to support data-driven decisions. Technical background in **Python**, **SQL**, and developing software solutions for data management and reporting.

SKILLS

Data Analysis: Google Sheets, Python, quantitative analysis, data visualization
Programming / Database: C, Python, JavaScript, TypeScript, PostgreSQL, SQL
Development Tools: Git, GitHub, Conda
Machine Learning & Computer Vision: PyTorch, Diffusion Policy, OpenCV, YOLOv5
Robotics & Simulation: ROS2, Webots, Teleoperation Systems
Operating Systems / Productivity: Windows, Linux (Ubuntu), Google Workspace, Microsoft Office

---

EXPERIENCE

AI and Robotics Laboratory (AIRLab) at Caraga State University – Main Campus — Intern
Project: Teaching RoArm-M2 Push and Pick-and-Place Behaviors
March 2026 – May 2026

- Collected and processed teleoperation demonstrations for robotic pushing and pick-and-place tasks
- Evaluated policy performance using task success rates, failure counts, and completion times
- Adapted an existing vision-based Diffusion Policy and developed a leader–follower teleoperation workflow
- Conducted sim-to-real experiments to assess policy performance on physical robotic hardware

---

SELECTED PROJECTS

6dMetrix — Sales Reporting and Inventory Dashboard

- Developed a system summarizing net sales, average transaction value, top-selling products, and sales by category across selectable date ranges
- Implemented CSV bulk import with row-level validation, duplicate reference detection, category-conflict checks, and atomic imports to maintain data integrity
- Built inventory tracking features using stock movements and completed sales, including low-stock and out-of-stock alerts
- Generated downloadable PDF and CSV reports and created interactive charts for exploring sales trends using a synthetic motorcycle-dealership dataset

a-Nventory — Inventory Management System Research and Design

- Designed a questionnaire for faculty, technical team members, and staff to investigate inventory-tracking practices, record-keeping challenges, perceived need for automation, and desired system features

- Interviewed the technical-team and student assistants to document existing borrowing and return workflows, inventory discrepancies, and equipment-tracking challenges
- Identified recurring issues, including missing equipment components, unlogged transactions, data loss risks, and difficulty tracing overdue or misplaced items
- Translated stakeholder findings into proposed system requirements, including QR-code scanning, equipment reservations, transaction tracking, and automated notifications
- Created system diagrams, use-case models, and UI wireframes to represent proposed workflows and functionality, both for admins and non-admins

Individual Undergraduate Thesis: Sim-to-Sim Transfer of Low-Dimensional Diffusion Policy for SO-ARM100 Pick-and-Place Using Webots Demonstrations

- Collected and processed teleoperation demonstrations to train a low-dimensional Diffusion Policy for simulated pick-and-place tasks
- Developed data collection and evaluation pipelines for systematic policy testing
- Evaluated task success rates, failure counts, and completion times across different simulated environments and testing conditions
- Implemented environment randomization to support policy evaluation and generalization testing
- Adapted an existing Diffusion Policy implementation to a custom Webots workflow through dataset, task, and workspace configuration

Prototype 0 (<p.0>): Custom Imperative Programming Language

- Designed and implemented a custom imperative programming language, its C-based compiler, and an integrated development environment (IDE)
- Conducted a survey among Computer Science, Information Technology, and Information Systems students comparing the custom language with C in terms of syntax, writability, and readability
- Collected user feedback to evaluate perceptions of the language and its usability

System Proposal and Design: MediHealthTrend Tracker - Database System

- Gathered information about existing clinic workflows, including patient consultation logging, monthly report preparation, and medicine restocking practices
- Identified data-management challenges associated with manual record-keeping, report generation, and tracking medicine usage and prevalent health complaints
- Used the gathered requirements to inform a proposed database system for automating consultation records, generating reports, and supporting data-driven healthcare planning

6dCIMS — Customizable Inventory Management System

- Developed a customizable inventory management system that allows organizations to define their own inventory tables and fields
- Implemented tool borrowing and partial-return tracking, consumed-material records with supporting attachments, and low-stock and overdue alerts
- Designed for offline use as a web application or Android app, with backup and restore functionality

---

EDUCATION

Caraga State University – Main Campus — Bachelor of Science in Computer Science (2022 – 2026)
Honors: Cum Laude

Mindanao State University – Iligan Institute of Technology — Bachelor of Science in Physics

- Completed five (5) semesters of the program

PRESENTATION

Students' Congress on Innovation, Informatics, and Computing (SCII-Com) 2026
Research Presenter — May 22, 2026
